PROFESSIONAL SUMMARY

Data Engineer candidate with hands-on experience building end-to-end ELT pipelines and analytics platforms using Python, SQL, dbt, Apache Airflow, Snowflake, and Docker. Skilled in dimensional modeling, incremental data processing, automated data-quality testing, CI/CD, and BI delivery across datasets containing millions of records.

TECHNICAL SKILLS

Programming: Python, SQL

Databases & Warehouses: Snowflake, PostgreSQL, SQL Server

Data Engineering: dbt Core, Apache Airflow, Snowpark, Snowpipe, Streams, Tasks, ELT, CDC, Kimball dimensional modeling, data-quality testing

Tools & BI: Docker, Git, GitHub Actions, Metabase, Power BI, Selenium

PROJECTS

Olist Modern Data Platform | 2026

github.com/DuyAnhNguyen1902/olist-modern-data-platform | Python | PostgreSQL | Airflow | dbt Core | Docker | Metabase | GitHub Actions

- Built an end-to-end ELT pipeline processing more than **1.5 million records** from nine Olist e-commerce datasets, covering profiling, validation, raw ingestion, and transformation.
- Designed a Kimball dimensional warehouse with fact and dimension tables and analytics marts; implemented **21 dbt models** and **85 automated data tests**.
- Developed idempotent incremental loading with updated_at timestamps, atomic watermarks, upserts, and dynamic task mapping; orchestrated full-refresh and daily pipelines with Apache Airflow.
- Containerized the platform with Docker Compose, added CI checks through GitHub Actions, and built a Metabase dashboard for revenue, order volume, AOV, and delivery performance.

Snowflake TPC-H Analytics Platform | 2026

github.com/DuyAnhNguyen1902/snowflake-tpch-analytics | Snowflake | SQL | Snowpark | Streams | Tasks | Snowpipe | Power BI

- Built an end-to-end Snowflake analytics platform processing **1.5 million orders**, **6 million line items**, and **150,000 customers** from the TPC-H SF1 dataset.
- Designed a Medallion architecture with 8 Bronze, 3 Silver, 2 Gold, and 2 Analytics tables for ingestion, cleansing, business aggregation, RFM segmentation, and monthly sales analysis.
- Implemented incremental CDC using Internal Stage, COPY/Snowpipe, Streams, Tasks, stored procedures, and idempotent MERGE; validated data propagation from Bronze through Silver and Gold.
- Established role-based access control and automated checks for nulls, duplicates, referential integrity, and reconciliation; built a two-page Power BI dashboard for revenue, order trends, customer value, and RFM analysis.

BikeStores Sales Intelligence Platform | 2026

github.com/DuyAnhNguyen1902/bikestores-sales-intelligence | SQL Server | T-SQL | Power BI | DAX | Python | GitHub Actions

- Built a star-schema analytics platform across Staging, Data Warehouse, and Data Mart layers.
- Developed an idempotent pipeline with audit logging and **34 data-quality checks**, processing **21,969 rows**.
- Reconciled **$6.66M in revenue with zero variance** and created marts for sales, RFM, staff, and inventory analysis.
- Built a four-page Power BI report with **49 DAX measures** and developed a three-month revenue forecast using Python.

EDUCATION

Posts and Telecommunications Institute of Technology **2023 - 2027**

Bachelor of Fintech | GPA: 3.75/4.00 | Academic Scholarship: 3 of 6 semesters

CERTIFICATIONS

TOEIC: 875/990 | Microsoft Certified: Power BI Data Analyst Associate (PL-300) | Microsoft Office Specialist: Microsoft Excel
